## **DETAILED ACTION**

### ***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance: the closest prior art of record (Lebar U.S. Pub. No. 2002/0059619, Teraoka U.S. Pat. No. 6292836) and Rao U.S. Pat. No. 6789118) does not teach nor suggest in detail "a method or system for mapping a digital network, the system comprising: a controller configured to send an initiate signal; and a plurality of network devices in communication with the controller, each network device configured to receive a transport stream that includes a stream of data packets, each data packet including a header and a data payload, each of the plurality of network devices further configured to receive the initiate signal from the controller; wherein, in response to receiving the initiate signal from the controller, each of the plurality of network devices generates a network message and sends the network message to the controller, the network message including information associated with the respective network device; and wherein, in response to receiving the network messages from the network devices, the controller generates a transport stream map, the transport stream map representing a flow of transport streams among the plurality of network devices, wherein each of the network messages includes an input transport stream identifier (input TSID) and an output transport stream identifier (output TSID), the input TSID identifying the transport stream received by the respective network device and the output TSID identifying the transport stream transmitted by the respective network device, wherein the controller is further configured to determine if a conflict exists between two

TSIDs, and, in response to determining that a conflict exists, creating unique TSIDs to resolve the conflict.

2. Furthermore, in response to receiving the network messages from the plurality of devices, grouping the devices into tiers and associating a first device of the first tier with a second device of a second tier based on information related to the input transport stream identifiers and output transport stream identifiers,” as argued by the Applicant (see Remarks dated 06/16/2008, pages 9 and 10 & Appeal Brief dated 12/26/2007; Specification as of 04/26/2006, pages 12 – 36; and Drawings dated 10/31/2005, Figures 4 – 10, of Applicant’s enabling portions of the specification and drawings).

3. Neither Teraoka, Rao or Lebar teach, alone or in combination, the claim language as stated above and in the application. More specifically, as stated in the Appeal Brief dated 12/26/2007, Teraoka and Rao do not teach the limitations in claim 49 - 69; see Arguments, pages 5 - 17.

4. As the claims are currently amended, Lebar does not teach the use of a controller generates a transport stream map, the transport stream map representing a flow of transport streams among the plurality of network devices and an input transport stream identifier and output transport stream identifier that is utilized in a manner that has a controller configured to determine if a conflict exists between two TSIDs and in response creating another TSID to resolve the conflict.

5. At best, Lebar teaches assigning TSIDs, none of which are indicated as input or output, to identify stream paths and groups of servers, (e.g., ¶¶ 0059 – 0064), but is not used to resolve any conflict between two TSIDs or other servers that are on the network.
6. The dependent claims further limit the independent claims and are considered allowable on the same basis as the independent claim as well as for the further limitations set forth. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
7. Claims 45 – 47, and 49 – 69 are allowed.
